Web service description

The NSW Address Location Service web service allows the user to enter an address and pinpoint the location of that address.

The NSW Address Location Service is derived from the Geocoded Urban and Rural Address System (GURAS) database.

Web service uses/fitness for purpose

This web service allows users to easily integrate NSW addressing information into spatial platforms and applications.

The addressing web service provides users with a unique and unambiguous identification of an address site and its location within NSW. The ability to identify the location of an address supports a wide range of business functions including: the delivery of products and services, public safety, communication and socio-economic and demographic analysis.

The GURAS database is the authoritative property addressing system for NSW.

Current state	This web service is current and complete.
Update frequency	As required.
Future development	LPI's Comprehensive Property and Addressing System (CPAS) program is currently reviewing the legislation, data and procedure for addressing in NSW. This is to minimise the duplication of address maintenance within government, reduce return on notices and important deliveries, improve property identification, and to complete jurisdictional commitment to the Geocoded National Address File (GNAF). Accessible through LPI Spatial Data Services.
Standards and specifications	Suitable for consumption by common GIS platforms.
Access and licensing	<p>Accessible through LPI Spatial Data Services.</p> <p>To the extent that Creative Commons licensing applies, all data and other material produced by LPI constitutes Crown copyright.</p> <p>Save for the content in this web service supplied by third parties, the LPI logo, NSW Government logo, the Commonwealth Coat of Arms, and any material protected by a trade mark.
