|------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Dataset/product description</b> | The State Border is a product dataset created from the LGA dataset which depicts the extent of NSW as described by the gazetted boundaries of Local Government Areas.                                                                                                                                                                                                                                                                                                                                 |
| <b>Dataset uses</b>                | Administrative Boundaries data underpins the economic, social and environmental fabric of NSW and is used, amongst other things, to: <ul style="list-style-type: none"><li>• secure tenure for access to capital</li><li>• define allowable use of land</li><li>• manage native title, nature conservation, heritage protection, defence, and disaster management</li><li>• improve infrastructure and property development planning</li><li>• inform water and carbon accounting programs.</li></ul> |
| <b>Current status</b>              | The Local Government Area dataset, on which the State Border dataset is based, is up to date as per the current boundaries gazetted by the NSW Office of Local Government.                                                                                                                                                                                                                                                                                                                            |

|                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
